

Performance Upgrades

Performance upgrades boost horsepower, torque, and fuel efficiency with tuned electronics, airflow, exhaust, and fuel system enhancements. Get stronger throttle response, smoother pulls, and better control. This includes superchargers, throttle controllers, throttle body spacers, mass air flow systems, and headers.

Motor Conversions

Motor conversions transform your vehicle by replacing or reconfiguring the engine system for more power, better efficiency, or updated technology. We are set up with Bruiser Conversions for LS systems and America's Most Wanted 4x4 for Hemi systems. V-8 conversions provide the foundation of horsepower and torque for on and off road situations; coupling that with Dynatrac, Currie Interprises, or Dana axles and you are ready for any challenge.

Lift Kits

Lift kits raise your truck's stance for improved ground clearance, off-road capability, and a bold look. They help you tackle rough terrain, fit larger tires, and enhance handling.

Suspension Systems

Full suspension systems improve ride quality, stability, and capability for your vehicle. They correct caster and pinion angle, adjust track to center the vehicle over the axles, reduce binding, and increase articulation. —helping your vehicle perform more efficiently mile after mile.

Custom Vehicle Build-Outs

Custom vehicle build-outs transform your rig into a fully personalized machine—engine (V8 conversions), suspension (lift kits), driveline (axles/driveshafts/gear ratio), interior (aftermarket seats/seat covers), and performance upgrades (supercharger/exhaust/tuners) tailored to your vision.
