

Your Van Should Work as Hard as You Do

A disorganized van costs you time on every job. The right up fit puts every tool, part, and piece of equipment exactly where you need it —so you spend less time digging and more time working. We've been building work vehicles for contractors across the Tennessee Valley, and we know what it takes to build a rig that lasts. We carry Ranger Design, WeatherTech, and Reading Truck Bodies —three of the most trusted names in the commercial up fit industry.

Cargo Van Shelving & Storage — Ranger Design

Ranger Design is one of the premier van shelving and storage system manufacturers in North America, and it's the backbone of most of our cargo van builds. Their aluminum and steel modular systems are engineered specifically for commercial use — lightweight, durable, and designed to organize a working van the way a working van needs to be organized.

We up fit all major cargo van platforms —Ford Transit, Ram ProMaster, Mercedes Sprinter, Chevrolet Express, and more. A typical Ranger Design build includes:

- Modular aluminum or steel shelving units with adjustable dividers and bins
- Drawer systems and slide-out storage for heavy tools and equipment
- Partition walls with door pass-through for security and cab separation
- Ladder racks and roof cargo systems
- Bulkhead and wall liner packages for protection and a clean finish
- Customized bin and parts storage layouts for specific trades

Ranger Design systems are available in configurations tailored for electricians, plumbers, HVAC techs, general contractors, and more. Every build starts with a conversation about your trade and how you work. We'll lay out the system that fits your workflow, not a generic template.

Truck Beds & Service Bodies — Reading Truck

For pickup trucks and cab-chassis work vehicles, we install Reading Truck service bodies and utility beds — the industry standard for contractors who need serious hauling and storage capability built into their truck.

Reading bodies are built from heavy-gauge steel and aluminum and are available in a range of configurations to match the job. Whether you need a classic contractor body with side compartments or a specialized utility setup, we can source and install the right unit for your platform and your work.

- Contractor bodies with full-length side storage compartments
- Utility bodies and service bodies for maintenance and fleet vehicles
- Landscape and dump body configurations
- Stake bodies and flatbed options
- Custom compartment layouts and locking hardware
- Towing packages and fifth-wheel prep integrated into the build

We work with F-250/350, Ram 2500/3500, Silverado 2500/3500, and most cab-chassis platforms. If your crew needs a truck that hauls, organizes, and protects your equipment, a Reading body build is worth the conversation.

Floor, Liner & Protection — WeatherTech

WeatherTech products are the standard for interior and cargo area protection, and we carry their full commercial and personal line. For work vans and trucks, WeatherTech floor liners and cargo mats take a beating every day and keep the vehicle's interior in serviceable shape for the long haul. For personal trucks and SUVs, they're the upgrade most owners wish they'd done from day one.

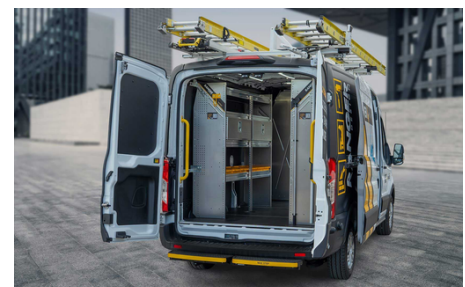

- WeatherTech Digital Fit floor liners — custom-molded to the exact vehicle
- Cargo liners and cargo area protection for vans and SUVs
- All-Weather floor mats for crew cab and work trucks
- TechLiner bed liner protection for pickup trucks
- Side window deflectors and sun shades

WeatherTech products are vehicle-specific and laser-measured —they fit correctly and protect completely. We stock common fitments and can order any vehicle-specific configuration quickly.

Additional Up fit Services

Beyond shelving, bodies, and liners, we handle the full range of van and truck accessories that make a work vehicle complete:

- LED interior and exterior work lighting packages
- Power inverters and electrical add-ons for onboard power
- Ladder racks and roof cargo systems for vans and trucks
- Toolboxes — crossover, chest-style, and under-bed configurations
- Running boards, nerf bars, and assist steps
- Spray-in bedliner for trucks not running a Reading body
- Backup cameras and fleet safety tech

Fleet Builds

Outfitting more than one vehicle? We work with contractors, property management companies, utility providers, and local businesses on fleet builds. Volume pricing is available and we can standardize Ranger Design, Reading, and WeatherTech configurations across your entire fleet for consistency, easier restocking, and lower long-term maintenance costs.
